## Abstracts

According to our (Global Info Research) latest study, the global Strawberry Glycidate market size was valued at US\$ 32.82 million in 2025 and is forecast to a readjusted size of US\$ 43.02 million by 2032 with a CAGR of 4.0% during review period.

Strawberry aldehyde is a widely used synthetic compound in the fragrance and flavor industry, primarily exhibiting a strong, sweet strawberry and fruity aroma. It is a middle-note fragrance, often added to floral or fruity perfumes, skincare products, and food flavorings due to its warm and sweet characteristics.

The upstream core raw materials are acetophenone and ethyl monochloroacetate, produced through the well-known Darzens condensation reaction (Darzens reaction) in the presence of a strong base catalyst (such as sodium ethoxide). The midstream process involves the purification and isomerization control of strawberry aldehyde.

Global sales in 2025 were approximately 5,000 tons, with an average selling price of US\$6,380 per ton. The industry's gross profit margin is between 20% and 30%.
