Abstracts

The global Streaming Processing Solution market size is expected to reach \$ 2722 million by 2032, rising at a market growth of 8.2% CAGR during the forecast period (2026-2032).

A Streaming Processing Solution refers to a software platform or cloud service designed for the real-time collection, transmission, computation, analysis, alerting, and output of continuously generated data streams. It is typically utilized to process real-time data sources such as Kafka, Flink, Pulsar, Kinesis, IoT feeds, logs, transaction records, and clickstreams. Its core value lies in enabling enterprises to complete data processing within milliseconds to seconds of data generation, rather than having to wait for batch-based offline computation.

As enterprises shift from batch processing to real-time analytics, scenarios such as financial risk management, IoT monitoring, logistics tracking, and user behavior analysis now demand that data be 'processed the moment it is generated.' Flink has emerged as one of the leading stream processing engines, with cloud providers like Alibaba Cloud and Tencent Cloud offering real-time computing services built upon Apache Flink. Real-time data streams are increasingly serving as the foundational data infrastructure for AI applications; indeed, IBM's announced acquisition of Confluent underscores the strategic value that data streaming platforms hold for enterprise AI.
