According to our (Global Info Research) latest study, the global Strep-Tag Purification Kits market size was valued at US\$ 64.82 million in 2025 and is forecast to a readjusted size of US\$ 114 million by 2032 with a CAGR of 8.2% during review period.

Strep-Tag Purification Kits are affinity purification consumables based on the reversible binding of Strep-Tag II or Twin-Strep-Tag with Strep-Tactin, Strep-Tactin XT, or similar streptavidin variants. They are used for isolating recombinant proteins from bacterial, yeast, insect/baculovirus, and mammalian expression systems. The estimated gross margin is approximately 60%.

Demand for Strep-Tag purification kits and related consumables primarily comes from universities and research institutions, structural biology platforms, drug discovery CROs, and early-stage biologics process development.

The value of the Strep system lies not in low cost but in its small tag size, mild purification conditions, low non-specific binding, and suitability for activity-sensitive samples such as protein complexes and membrane proteins. This ensures stable penetration in challenging recombinant protein preparations.

On the supply side, standardized procurement is driven by high-end providers like IBA and Cytiva, while Chinese manufacturers are expanding in magnetic beads, pre-packed columns, and conventional resins. Future growth will come from high-throughput expression screening, automated magnetic bead platforms, high-affinity Strep-Tactin XT systems, and domestic alternatives. However, this product remains primarily for research and small-scale applications, with a market size significantly smaller than Ni-

NTA/His-tag purification products.
