Abstracts

The global Streptococcus Agalactiae Nucleic Acid Detection market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

The scientific name of GBS is Streptococcus agalactiae, also known as group B Streptococcus. It normally lives in the vagina and rectum. It is an opportunistic pathogenic bacteria. Invasive infections are most common in neonates, the elderly, and those with predisposing factors (i.e., pregnancy, diabetes, and immunocompromise). Generally, GBS infection in normal healthy people does not cause illness. According to research, about 10% to 30% of pregnant women have GBS vaginally resident, and 40% to 70% of them will be passed to their newborns during delivery. If newborns carry GBS, about 1% to 3% will develop early invasive infection, of which 5% will lead to death. Infections in pregnant women manifest as bacteremia, urinary tract infection, fetal membrane infection, endometrial infection and wound infection.
