According to our (Global Info Research) latest study, the global Stretch Hood Packaging Machine market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

The stretch hood packaging machine is a device that uses stretch film to repackage stacked products as a whole for easy transportation and storage. The working principle of the stretch hood packaging machine is to roll the cylindrical film into a single empty bag with the bag bottom at the upper end, stretch the empty bag transversely and then cover it on the stacked products, and then shrink it by heat or cold. The shrinkage holds the film tightly against the product, forming a stable packaging unit. The advantages of the stretch hood packaging machine are fast packaging speed, good packaging effect, saving packaging materials, and it is suitable for products of various shapes and sizes.
