Abstracts

The global Strip Marking Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Strip marking machine is a kind of equipment used to mark semiconductor materials. In the semiconductor manufacturing process, materials such as wafers and chips need to be marked for subsequent processing and tracking. The strip marking machine can print the information to be marked (such as QR code, barcode, text, etc.) on the surface of the material for subsequent identification and tracking. Strip marking machines usually have the characteristics of high precision, high speed, and high reliability, and can adapt to the high requirements for material marking in the semiconductor manufacturing process. At the same time, since semiconductor materials are usually very fragile, the strip marking machine also needs to have non-contact marking technology to avoid damage to the material.

This report studies the global Strip Marking Machine production, demand, key manufacturers, and key regions.
