## Abstracts

According to our (Global Info Research) latest study, the global Strong Magnetic Filter market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Strong magnetic filter is a device that uses a strong magnetic field to filter and separate ferrous impurities or other magnetic substances. When the fluid containing magnetic impurities passes through the filter, these magnetic particles are attracted by the magnetic field and captured on the surface of the magnetic rod or magnetic plate, thereby separating from the fluid. Strong magnetic filter can effectively remove ferromagnetic impurities in the fluid, improve product purity and quality, and protect downstream equipment from wear and damage. It has the advantages of high efficiency and energy saving, easy maintenance, simple operation and wide application range.
