## Abstracts

Strontium iodide (SrI<sub>2</sub>) is a salt of strontium and iodine. It is an ionic, water-soluble, and deliquescent compound that can be used in medicine as a substitute for potassium iodide [5]. It is also used as a scintillation gamma radiation detector, typically doped with europium, due to its optical clarity, relatively high density, high effective atomic number (Z=48), and high scintillation light yield [6]. In recent years, europium-doped strontium iodide (SrI<sub>2</sub>:Eu<sup>2+</sup>) has emerged as a promising scintillation material for gamma-ray spectroscopy with extremely high light yield and proportional response, exceeding that of the widely used high performance commercial scintillator LaBr<sub>3</sub>:Ce<sup>3+</sup>. Large diameter SrI<sub>2</sub> crystals can be grown reliably using vertical Bridgman technique [7] and are being commercialized by several companies.

According to our (Global Info Research) latest study, the global Strontium Iodide market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.
