Structural Adhesives for Marine refer to a type of high-performance adhesives specially used for bonding ship structural parts. They can provide high-strength bonding in the connection of structural parts that are subjected to greater stress, making the connected materials a whole and jointly bearing external forces. Ships sail in complex and harsh environments such as rivers, lakes, and seas for a long time, with changeable climates and common accidents. Therefore, special requirements are put forward for ship structural adhesives, such as resistance to seawater, atmospheric aging, oil resistance, high and low temperature alternation resistance, flame retardancy, and vibration resistance.
