Structural Adhesives for Shipbuilding refer to an adhesive used to connect and reinforce the hull structure during the shipbuilding process. This adhesive has the characteristics of high strength, aging resistance, fatigue resistance, corrosion resistance, etc., can maintain stable performance within the expected life, and is suitable for bonding strong structural parts.

Structural adhesives are widely used in the shipbuilding industry. They can be used to connect and reinforce various parts of the hull, such as the bonding of propellers and stern shafts, and the bonding of crankshafts. Compared with traditional connection methods such as welding and riveting, the use of structural adhesives for connection has the advantages of uniform stress distribution, no thermal impact and deformation on parts, and simple construction process. At the same time, structural adhesives can also improve the integrity and crack resistance of the hull, thereby extending the service life of the hull.
