Abstracts

The global Structural Finite Element Analysis Software market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Structural finite element analysis is a modern calculation method developed rapidly for structural mechanics analysis. It is an effective numerical analysis method that was first applied in the field of continuum mechanics—the analysis of static and dynamic characteristics of aircraft structures in the 1950s, and was soon widely used to solve problems such as heat conduction, electromagnetic field, and fluid mechanics. Structural FEA software refers to Finite Element Analysis, a software simulation technique that engineers and scientists use to computational model complex designs and processes. The software imports a CAD (3D) model and then applies a mesh to break up that model into individual finite pieces. Each piece is then solved individually using neighboring pieces as boundary conditions, sometimes iteratively.
