Electronic medical records refer to information about personal health status and medical care that is managed electronically. They can replace paper medical records as the main information source in medical care to meet diagnosis, treatment, legal and management needs. It is the core and most important component of the clinical information system. It can be used as a platform to seamlessly integrate with HIS, PACS, LIS, RIS and other systems to achieve information resource sharing. Structured Electronic Medical Record (SEER) is a more advanced electronic medical record system that structures patient information to make data more standardized and easier to query and analyze. Structured electronic medical records can conduct in-depth analysis of patients' medical information through data mining and artificial intelligence technology, providing doctors with more accurate diagnosis and treatment recommendations.
