According to our (Global Info Research) latest study, the global Structures Design Software market size was valued at US\$ 4280 million in 2025 and is forecast to a readjusted size of US\$ 6524 million by 2032 with a CAGR of 6.2% during review period.

Structural Design Software refers to specialized software tailored for buildings, bridges, industrial facilities, and other engineering structures. It is utilized for the digital modeling of structural systems, load analysis, force calculations, component and joint design, code compliance checks, and drafting; furthermore, it facilitates integration with collaborative workflows for BIM, detailing, and construction. Its core value lies in empowering structural engineers to more efficiently assess the performance and safety of structures under various conditions?including static loads, dynamic loads, wind loads, seismic forces, and thermal loads?as well as to optimize design schemes for steel, concrete, timber, and composite structures, thereby minimizing design errors, reducing rework, and shortening the overall project lifecycle.
