The global Structures Design Software market size is expected to reach \$ 6524 million by 2032, rising at a market growth of 6.2% CAGR during the forecast period (2026-2032).

Structural Design Software refers to specialized software tailored for buildings, bridges, industrial facilities, and other engineering structures. It is utilized for the digital modeling of structural systems, load analysis, force calculations, component and joint design, code compliance checks, and drafting; furthermore, it facilitates integration with collaborative workflows for BIM, detailing, and construction. Its core value lies in empowering structural engineers to more efficiently assess the performance and safety of structures under various conditions?including static loads, dynamic loads, wind loads, seismic forces, and thermal loads?as well as to optimize design schemes for steel, concrete, timber, and composite structures, thereby minimizing design errors, reducing rework, and shortening the overall project lifecycle.
