Stucco fences refer to fences that are made or covered with stucco, which is a type of plaster or cement-based material used for coating walls, ceilings, and other structures. Stucco fences typically have a smooth or textured surface, depending on the application technique and the desired aesthetic. The texture can range from a fine, almost polished finish to a more rustic, bumpy look, which can add visual interest and character to the fence.

The base structure of a stucco fence is usually made of wood, metal, or concrete posts and rails, which provide the framework and support for the stucco coating. Wood is a popular choice for its natural look and relatively easy installation, while metal and concrete offer greater durability and strength. Once the framework is in place, a layer of stucco is applied. Stucco is typically a mixture of cement, sand, lime, and water. Fibers or other additives may also be included to improve its strength and resistance to cracking. The stucco is troweled onto the surface of the fence structure in one or more layers, with each layer allowed to dry and cure before the next is applied. This process creates a thick, durable coating that adheres well to the underlying structure and provides protection against the elements.
