Abstracts

The global Studded Snow Tires market size is expected to reach \$ 5924.8 million by 2030, rising at a market growth of 2.5% CAGR during the forecast period (2024-2030).

The Studded Snow Tires market is driven by the need for superior traction and control in severe winter conditions, such as icy and snowy roads. Studded tires are equipped with metal studs embedded in the tread, providing enhanced grip on slippery surfaces. The market's growth is propelled by the demand for increased safety during winter driving, particularly in regions with harsh climates. Studded snow tires excel in icy terrains, offering stability and improved braking performance. While there are environmental considerations due to road wear and tear, the market continues to thrive as a vital solution for drivers prioritizing maximum traction in extreme winter weather conditions.

Studded snow tires are winter tires that feature metal studs or spikes embedded in the tread to provide enhanced traction on icy and hard-packed snow-covered roads. These metal studs, usually made of tungsten carbide or other durable materials, protrude from the tire's surface and bite into the ice, improving grip and stability in slippery conditions.
