According to our (Global Info Research) latest study, the global Stun Gun market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Stun guns or conducted electrical weapons (CEWs) are used for incapacitating a potential suspect. Such weapons deliver electric shocks with the purpose of disrupting the muscle functions without causing substantial damage to the suspect who could be a threat to law and order. These stun guns are used to control violent situations involving civilians, as well as in scenarios where the use of lethal weapons is discouraged, or where policy limits employment of conventional force.

The growing emphasis on using conducted electrical weapon (CEWs) will drive the growth prospects for the global stun gun market until the end of 2023. One of the major factor leading to the deployment of CEWs is to incapacitate a hostile person by causing pain through the application of electric current. Also, when lethal force is avoided to maintain human right laws, the military personnel, police, and law enforcement agencies deploy CEWs. Moreover, stun guns with probes are effective against people who are under the influence of drugs or alcohol that makes them less sensitive to pain. In addition, stun guns are increasingly preferred by military and law enforcement agencies since it reduces the risk of fatality and can be used from a safer distance.
