According to our (Global Info Research) latest study, the global Styrax market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Styrax is a natural resin obtained from the bark of certain trees belonging to the Styracaceae family. It has been used for centuries in various cultures for medicinal, aromatic, and incense purposes. There are several species of trees that produce styrax resin, but two of the most notable ones are *Liquidambar orientalis* (also known as Oriental sweetgum) and *Liquidambar styraciflua* (commonly known as American sweetgum).

When the bark of these trees is damaged or wounded, it exudes a fragrant resin, which hardens upon exposure to air. This hardened resin is then collected and used for various applications.

Styrax resin has a distinctive sweet, balsamic, and slightly spicy aroma. It is commonly used in perfumery as a base note to add warmth and depth to fragrances. StyraX is also utilized in incense and as a fixative in various cosmetic and fragrance formulations.

In traditional medicine, styrax resin has been used for its supposed healing properties, including as an antiseptic and expectorant. However, its medicinal use has decreased over time due to the availability of more effective modern medicines.
