The global Subcritical Refrigeration System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A subcritical refrigeration system is a type of refrigeration system that operates below the critical point of the refrigerant. In a subcritical system, the refrigerant is in a liquid state at the evaporator and condenser, and it undergoes a phase change from liquid to vapor and back to liquid during the refrigeration cycle. Subcritical refrigeration systems are commonly used in various applications such as residential air conditioning, commercial refrigeration units, and many industrial cooling processes. They are generally designed for refrigerants that operate in a subcritical state, meaning their pressure-temperature relationship remains below the critical point throughout the refrigeration cycle.

This report studies the global Subcritical Refrigeration System production, demand, key manufacturers, and key regions.
