The global Subjective Refraction Units market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Subjective Refraction Units is a device for optometry of glasses through digital image acquisition and processing technology. At present, the Subjective Refraction Units market structure is gradually showing a situation of 'few large factories and many small factories'. The high-end market has a large market share of digital refractors, and the low-end market is still in its infancy.

Subjective Refraction Units can perform optometry more accurately and quickly, reduce eye fatigue of users, and gradually replace traditional optometry methods. With the rapid development of artificial intelligence and Internet of Things technology, people's demand for Subjective Refraction Units continues to grow. The Subjective Refraction Units can not only perform high-quality optometry, but also store data in the cloud for query and analysis by doctors and patients. The market for Subjective Refraction Units is expanding to a wider range of applications, such as universal vision care, pupil analysis, etc.

Subjective Refraction Units allow ophthalmology practices to quickly and easily determine a patient's prescription. Today's Subjective Refraction Units increase efficiency, decrease errors, and come with a multitude of features like EMR integration.

This report studies the global Subjective Refraction Units production, demand, key manufacturers, and key regions.
