The global Sublimation Printers market size is expected to reach $ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Sublimation printing is a digital printing process that uses heat and pressure to transfer dye onto different materials. The process involves printing a design onto special transfer paper using sublimation inks, and then placing the paper onto a product and heating it with a heat press. A sublimation printer is a printing machine that uses a special sublimation ink that permeates objects with ink vapors. Sublimation printers are standard inkjet printers that are purpose-built for sublimation.
