## Abstracts

The global Submarine Cable Maintenance market size is expected to reach \$ 20683 million by 2032, rising at a market growth of 11.7% CAGR during the forecast period (2026-2032).

Submarine cable maintenance refers to a series of systematic and professional monitoring, inspection, repair, and protection activities undertaken to ensure the safe and stable operation of submarine communication cables that carry over 95% of global international data transmission. Its core tasks include regular inspections of cable lines using ships and underwater robots, precise location and salvage of fault points, and deep-sea splicing and repair of damaged cables. This service involves not only highly complex marine engineering but also requires comprehensive consideration of risks related to marine geology, fisheries activities, and ship anchor damage. It is a crucial strategic safeguard for ensuring the physical layer security of global digital infrastructure and maintaining uninterrupted international information flow.

Its prospects are crucial and continuously growing against the backdrop of deepening global digitalization and geopolitical competition. The core driving forces are the explosion of data traffic, the surge in new cable construction, and an unprecedented emphasis on infrastructure resilience. Future trends focus on technological intelligence and preventative upgrades: artificial intelligence will be used for predictive maintenance and fault analysis, and autonomous underwater robots will undertake more complex tasks; simultaneously, the focus of maintenance will shift from "post-fault repair" to "full lifecycle health management," achieving real-time threat monitoring through distributed fiber optic sensing. As submarine networks become critical national infrastructure, the strategic value of maintenance services is becoming increasingly apparent, which will spur higher standards of international cooperation, rapid response mechanisms, and the

development of specialized fleets, leading to a market that is moving towards high-tech and high-capital-intensive development.
