## Abstracts

According to our (Global Info Research) latest study, the global Submarine Electricity Transmission market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Submarine electricity transmission allows the transfer of energy below the surface of water. Submarine power cables are major transmission cables for carrying electric power beneath water. Demand for submarine cables is growing as countries and regions make commitments to offshore renewable power generation.

Submarine power transmission can be economically more beneficial than overhead transmission, on account of reduction in the total cost of system ownership. The power surplus countries are looking for opportunities to sell electricity to countries that are power starved. The power trading between countries results in an optimal usage of power generation facilities, which requires the availability of the most appropriate systems. The submarine power transmission systems can be very handy in power transportation between countries, which is a big boost for their adoption.
