## Abstracts

According to our (Global Info Research) latest study, the global Submarine Emergency Ventilation and Decompression Systems (SEVDS) market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Submarine Emergency Ventilation & Decompression Systems (SEVDS) is a surface air-supplied, umbilical connection system designed to sustain submarines in distress (DISSUB).

During a submarine dive, the sealed cabin interior is isolated from the outside environment, and oxygen, air quality and pressure all need to be maintained and controlled. However, under certain circumstances, a submarine may encounter an emergency or require an emergency resurface. At this time, SEVDS can provide the necessary ventilation and decompression functions to ensure the safety inside the submarine.
