Abstracts

Submarine power cables are used to transmit electricity below the ocean, that is, deep under the sea bed. These cables are used to transfer electricity from offshore wind turbines, tidal power projects, and onshore locations to oil rigs as well as to transmit electricity across countries or islands. Countries such as the UK and Germany that generate huge amounts of renewable energy through wind turbines use submarine power cables to export it to neighboring countries having less energy generation capacity.

Scope of the Report:

This report focuses on the Submarine Power Cable in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The overall market is set to witness significant growth because of the increasing offshore wind installations, growing demand for inter-country and island connection, and demand from offshore oil & gas sector. Increasing demand for HVDC connections is one of the major opportunities for the Submarine Power Cable Market.

The offshore wind power generation segment is expected to hold the largest share of the Submarine Power Cable Market during the forecast period. Growing investment in the renewable sector and technology advancements along with government initiatives are the major factors driving the Submarine Power Cable Market in Europe. New offshore wind generation capacity is under development in countries in Asia Pacific, especially China. These factors have resulted in the highest market share of the

offshore wind power generation segment in the Submarine Power Cable Market.
