## Abstracts

The global Submarine Rescue Systems market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Submarine Rescue System is a surface support ship for submarine rescue and deep-sea salvage operations. Submarine rescue is the process of locating a sunk submarine with survivors on board, and bringing the survivors to safety. This may be done by recovering the vessel to the surface first, or by transferring the trapped personnel to a rescue bell or deep-submergence rescue vehicle to bring them to the surface.

Submarine rescue may be done at pressures between ambient at depth, and sea level atmospheric pressure, depending on the condition of the distressed vessel and the equipment used for the rescue.

This report studies the global Submarine Rescue Systems production, demand, key manufacturers, and key regions.
