Submarine telecommunication cable is a type of cable designed for transmitting telecommunications signals underwater. It is typically made up of fiber optic cables or copper wire pairs and can be used for communicating between land-based stations and submarines or other underwater vehicles. Submarine telecommunication cables are often used in connection with offshore oil and gas drilling platforms or other offshore structures, as well as for military applications. They may also be used to connect offshore wind farms and other offshore renewable energy facilities to land-based power grids.

The Global Mobile Economy Development Report 2023 released by GSMA Intelligence pointed out that by the end of 2022, the number of global mobile users would exceed 5.4 billion. The mobile ecosystem supports 16 million jobs directly and 12 million jobs indirectly.

According to our Communications Research Centre, in 2022, the global communication equipment was valued at US\$ 100 billion. The U.S. and China are powerhouses in the manufacture of communications equipment. According to data from the Ministry of Industry and Information Technology of China, the cumulative revenue of telecommunications services in 2022 was ?1.58 trillion, an increase of 8% over the previous year. The total amount of telecommunications business calculated at the price

of the previous year reached ?1.75 trillion, a year-on-year increase of 21.3%. In the same year, the fixed Internet broadband access business revenue was ?240.2 billion, an increase of 7.1% over the previous year, and its proportion in the telecommunications business revenue decreased from 15.3% in the previous year to 15.2%, driving the telecommunications business revenue to increase by 1.1 percentage points.
