According to our (Global Info Research) latest study, the global Submerged Arc Welders market size was valued at USD 1486.8 million in 2023 and is forecast to a readjusted size of USD 1996 million by 2030 with a CAGR of 4.3% during review period.

This report focus on Submerged Arc Welders market.

Submerged arc welding is an arc welding process in which heat is generated by an arc which is produced between bare consumable electrode wire and the workpiece. The arc and the weld zone are completely covered under a blanket of granular, fusible flux which melts and provides protection to the weld pool from the atmospheric gases.

The molten flux surrounds the arc thus protecting arc from the atmospheric gases. The molten flux flows down continuously and fresh flux melts around the arc. The molten flux reacts with the molten metal forming slag and improves its properties and later floats on the molten/solidifying metal to protect it from atmospheric gas contamination and retards cooling rate.
