According to our (Global Info Research) latest study, the global Submersible Axial Flow Pump market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Submersible axial flow pump is a pump designed to move a large amount of fluid in low head (or low pressure) environments. It is typically used in applications that require moving high flow rates of water or other liquids from one location to another, such as flood control, irrigation, or drainage systems. The pump consists of an electric motor and a propeller installed on the shaft. Both the motor and propeller are submerged in the pumped fluid, which makes the pump operate more efficiently than surface mounted pumps. When the motor rotates the propeller, it generates a stream of fluid that flows in a straight line parallel to the pump shaft.
