## Abstracts

The global Submersible Liquid Cooled Data Center Power Supplies market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Submersible liquid-cooled power supplies refer to power supplies that are designed for use in submersible, liquid-cooled data centers. These power supplies are typically more efficient and have higher power densities than traditional air-cooled power supplies, as they use liquid cooling to dissipate heat more effectively.

In submersible liquid-cooled data centers, the power supplies are immersed in a non-conductive liquid that absorbs the heat generated by the electronics. The liquid is circulated through a cooling system that removes the heat from the data center and dissipates it into the environment.

Submersible liquid-cooled power supplies are becoming more popular in data centers due to their higher efficiency and power densities, which can help data centers reduce their energy consumption and overall operating costs.
