Submersible sand pump is a kind of equipment specially designed for extracting sand, mud and other sediments from water. It is widely used in construction, mining, dredging and agriculture. The pump is directly immersed in water through an electric or diesel-driven motor. It uses centrifugal force and the rotation of the impeller in the pump body to suck in the liquid and solid mixture and discharge it through the pump outlet. Submersible sand pump is characterized by high efficiency, wear resistance and easy operation, and can operate continuously in harsh environments. Its design makes the pump have low noise and vibration when working, which is suitable for various engineering needs and has become an indispensable equipment in modern water conservancy projects and mining operations.
