The global Submersible Solar Water Pumps market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Submersible Solar Water Pumps are water pump systems powered by solar energy. It usually consists of solar panels, controller and water pump. The solar panel converts sunlight into electrical energy, and then transmits the electrical energy to the water pump through the controller so that the water pump can work. This kind of water pump is usually installed underwater and can be used to extract groundwater, irrigate farmland, provide water to livestock, etc. It does not require external energy supply, is environmentally friendly, energy-saving, and easy to operate. It has great application potential in remote areas or places without power supply.
