The global Submersible Utility Pump market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A submersible utility pump is a type of water pump that is designed to be completely submerged in water. It is typically used for pumping out or draining water from basements, swimming pools, ponds, or other areas where water needs to be removed. The pump is designed to be portable and easy to use, with a waterproof motor and housing that allows it to operate underwater. Submersible utility pumps are often equipped with a float switch that automatically turns the pump on and off based on the water level, preventing the pump from running dry. They are commonly used for both residential and commercial applications and are available in various sizes and power capacities to suit different pumping needs.
