According to our (Global Info Research) latest study, the global Subminiature Circular Connector market size was valued at US\$ 514 million in 2024 and is forecast to a readjusted size of USD 778 million by 2031 with a CAGR of 6.2% during review period.

A subminiature circular connector is a type of connector used to connect coaxial RF cables or circuits in high-frequency applications. It is characterized by its small size, circular shape, and ability to withstand high frequencies and voltages.

Subminiature circular connectors are typically made of metal materials such as gold-plated brass or stainless steel, and have a threaded male or female end that screws into or onto the mating connector. They are commonly used in RF communication systems, such as microwave transmitters, receivers, and antennas, as well as high-speed data transmission applications.

Consumer electronic equipment: With the trend of thinner and smaller consumer electronic equipment, the demand for connectors is also increasing. For example, portable devices such as smartphones and tablets require connectors to ensure the proper operation of their internal circuits. It is expected that the demand for ultra-small circular connectors will further rise in the next few years, especially in terms of miniaturization and integration.

Automotive industry: The degree of electronics in automobiles is increasing day by day, and the demand for connectors has also increased significantly. In order to improve the safety and performance of automobiles, connectors need to meet higher reliability, high temperature resistance, vibration resistance and other requirements. Connectors are in

particularly high demand in new energy vehicles, as batteries and other components of electric vehicles require a large number of power and signal connections.
