Abstracts

Subscription management software, also called subscription billing or recurring billing software, automates the billing cycle for subscription revenue models. These tools have become increasingly important with the rise of SaaS businesses. For start-ups especially, lighter weight subscription billing applications (which are inexpensive and fast to implement) can allow businesses to start processing online payments quickly. Fewer legal, finance, and accounting resources are required to manage different subscription cycles across different customers/accounts.

Subscription management software builds out of a combination of automated payment gateway functionality, Dunning tools, and customer subscription information management. Together, these capabilities mitigate billing friction and declined card disruption by automating payment processes and ensuring that stored payment information is still valid and up to date. Subscription management software also enables better visibility into recurring revenue streams, forecasting, and other analyses via native analytics and dashboards.

According to our (Global Info Research) latest study, the global Subscription Management and Recurring Billing Software market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
