The global Subsea Batteries for AUV & ROV market size is expected to reach \$ 245 million by 2032, rising at a market growth of 8.4% CAGR during the forecast period (2026-2032).

Subsea Batteries for AUV & ROV are specialized energy storage system designed to power underwater vehicles such as autonomous underwater vehicles and remotely operated vehicles. These batteries are engineered to operate reliably in harsh subsea environments characterized by high pressure, low temperatures, and long-duration missions. They typically use high-energy-density chemistries, most commonly lithium-ion, and are integrated with pressure-resistant housings and battery management systems to ensure safety, efficiency, and stable power supply for propulsion, navigation, sensors, and onboard electronics during underwater operations. The annual production of this product is approximately 100 MWh, and the price is approximately USD 1.45/KWh.

Upstream of Subsea Batteries for AUV & ROV consists of lithium-ion cell manufacturers, specialty materials suppliers providing cathode and anode materials, separators, electrolytes, and battery management system components, along with subsea-grade pressure housings, corrosion-resistant alloys, oil-compensation systems, connectors, and subsea electrical penetrators; precision machining, sealing technology, and high-reliability electronics integration are critical capabilities at this stage. Downstream, these modules are supplied to manufacturers and operators of remotely operated vehicles, autonomous underwater vehicles, subsea inspection tools, offshore oil and gas production systems, marine research institutions, and increasingly offshore renewable energy projects, where they enable untethered operations, backup power, and subsea electrification solutions in deepwater and harsh marine environments.
