A Subsea Buoyancy Foam Module is a pressure-resistant buoyancy component made primarily from syntactic foam containing hollow microspheres. It provides stable uplift and weight compensation for subsea equipment at specified operating depths. Products include modular buoyancy blocks, clamp-on modules and custom-molded structures. The scope excludes ordinary flotation foam, surface buoys, complete buoyancy tanks, raw syntactic foam materials and subsea equipment without separately identifiable buoyancy modules.

The industrial chain includes upstream epoxy or polymer resins, hollow glass microspheres, fillers, adhesives, coatings, molds and fastening components. Midstream covers formulation, casting, curing, precision machining, structural assembly, coating, pressure testing and buoyancy verification. Downstream applications include remotely operated vehicles, autonomous underwater vehicles, risers, umbilicals, subsea
