The global Subsea Cables for Offshore Wind market size is expected to reach \$ 477.5 million by 2029, rising at a market growth of 5.4% CAGR during the forecast period (2023-2029).

With the continuous development of flexible DC submarine cable technology, its application in the offshore wind power field will gradually increase in the future. Flexible Subsea Cables for Offshore Wind have higher transmission efficiency, longer transmission distance and higher voltage levels, and can better meet the needs of offshore wind farms.

Subsea Cables for Offshore Wind are high-voltage or ultra-high-voltage power cables that usually consist of three components: conductor, insulation and protective layer. The conductor is used to transmit electricity, the insulation layer is used to protect the conductor from electric shock and mechanical damage, and the protective layer is used to protect the cable from seawater corrosion and other environmental factors.
