According to our (Global Info Research) latest study, the global Subsea Manifolds market size was valued at USD 4114.7 million in 2023 and is forecast to a readjusted size of USD 5390.4 million by 2030 with a CAGR of 3.9% during review period.

Subsea manifold is a flow-routing subsea hardware (subsea flow router) that connects between subsea trees and flowlines. It is used to optimize the subsea layout arrangement and reduce the quantity of risers connected to the platform. If connected to dual flowlines, the manifold can typically accommodate pigging and have the capability of routing production from a particular tree to a particular flowline.
