Subsea pipeline coating solutions are a material and engineering system designed for rigid steel subsea oil, gas, water injection, carbon dioxide transportation, and production lines. These solutions utilize specialized polymers, epoxy, concrete, polyurethane, elastomers, synthetic foams, and aerogels to form a functional layer providing corrosion protection, mechanical protection, negative buoyancy control, and thermal insulation on the outer surface of steel pipes, pipe circumferential welds, and subsea connection components. Its product forms mainly include single- or double-layer fusion-bonded epoxy, three-layer polyethylene, three- or multi-layer polypropylene, steel wire mesh reinforced concrete counterweight, polyurethane and synthetic foam insulation, elastomer wet insulation, aerogel tube-in-tube insulation, heat shrink sleeves, liquid epoxy, injection-molded polyolefin and viscoelastic patching systems; its processes include surface sandblasting, induction heating, powder coating, adhesive and polyolefin extrusion, concrete wrapping, casting or molding insulation, on-site patching, process evaluation and quality inspection.
