Abstracts

The global Subsea Pipeline Steel market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Demand for marine resource development: As the global demand for the development of marine resources continues to increase, the scale and number of submarine pipelines, as important infrastructure for the development of marine resources, are also increasing. This has driven the development of subsea pipeline steel to meet greater market demand.

Energy transmission needs: Submarine pipelines are mainly used to transport oil, natural gas and other energy. With the growth of global energy consumption and the adjustment of energy structure, the transmission capacity and safety requirements of submarine pipelines are also constantly increasing. Submarine pipeline steel needs to have higher strength and corrosion resistance to meet the needs of long-term, efficient and safe energy transmission.
