Subsea Production System HPU is a vital component in offshore oil and gas operations, providing hydraulic power to operate various subsea equipment, such as blowout preventers (BOPs), valves, pumps, and actuators. The HPU generates and manages hydraulic pressure to control and power the production system installed on the seafloor. Typically located on the platform or subsea facility, it consists of pumps, motors, reservoirs, and control systems, designed to ensure reliable and continuous power to the subsea infrastructure. HPUs are crucial for the safe and efficient operation of subsea wells, helping to manage pressure, fluid flow, and equipment actuation in harsh offshore environments.
