Abstracts

Subsea production system consists of subsea completed well, seabed wellhead, subsea production tree, subsea tie-in to flowline system, and subsea equipment and control facilities to operate the well. It can range in complexity from a single satellite well with a flowline linked to a fixed platform, FPSO (Floating Product, Storage and Offloading), or onshore facilities, to several wells on a template or clustered around a manifold that transfer to a fixed or floating facility or directly to onshore facilities.

Scope of the Report:

This report focuses on the Subsea Production Systems in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The rising number of deep and ultra-deepwater drilling projects will be one of the primary growth drivers for the global subsea production systems market till 2022. For instance, it is estimated that starting from 2019, the first production activity will take place at the Snefrid Nord gas field. The number of active rigs is increasing due to the gradual increase in offshore drilling projects, especially in the Gulf of Mexico region. This in turn, will benefit drilling and production companies and boost the profit margin.

The rising offshore activities and significant resource richness in EMEA are driving the growth prospects for the subsea production systems market in the region. Market players find this region to be a lucrative market for subsea production systems due to the low-cost production capability of countries in the Middle East. As a result, the market

will continue to grow in the region throughout the estimated period.

The worldwide market for Subsea Production Systems is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
