Abstracts

According to our (Global Info Research) latest study, the global Subsea Real-Time Multiphase Flow Meter market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A subsea real-time multiphase flowmeter is a device used to measure the individual phase flows of the constituent phases in a given flow (such as the oil and gas industry) where the oil, water and gas mixture is initially mixed together during the oil production process. Because oil, gas, and water all contain hydrogen atoms, multiphase flows can be measured using magnetic resonance. For this, the fluid is magnetized and subsequently excited by radio frequency pulses. The hydrogen atoms respond to the pulse and send back recorded echoes.
