Subsea Storage Unit (SSU) is a device used to store liquids (such as oil, gas or water) on the sea floor, usually installed below or near the seabed. It ensures safe storage and management of liquids in deep-sea environments through its high-pressure, corrosion-resistant structural design. Such units are widely used in the oil and gas industry to temporarily store crude oil or natural gas for subsequent transportation or processing. In addition, it can also be used in the field of renewable energy to store excess energy. Subsea storage units are designed and operated in accordance with stringent Marine engineering standards to ensure environmental safety and efficient operation.
