Abstracts

A subsoiler is a tillage equipment that is used to break up compacted soil to improve the setting for growing crops. The subsoiler can plow about 2 feet into the soil.

Scope of the Report:

This report focuses on the Subsoiler in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The latest trend gaining momentum in the market is the increased price of fuel. The increasing use of alternative fuels is one of the emerging trends spurring this market's growth prospects in the coming years. Agricultural machinery works on fuel such as diesel and petrol. With the continuous increase in prices of these fuels, the farmers are increasingly focusing on the use of alternative fuels such as lubricant oils. For example, petroleum-based lubricants are being replaced with oil-based bio-lubricants. Although bio-lubricants are priced higher, they are increasingly preferred by farmers owing to the several benefits associated with their use, such as durability of fuel engine, low operating cost, and easy maintenance of machinery.

APAC is estimated to be the major revenue contributor to the market by 2023. The region had witnessed immense government support such as in the form of subsidies, incentives, and regulations to support agricultural development. This support is in the form of credit which has enabled farmers and vendors to invest in subsoilers.

The worldwide market for Subsoiler is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017,

according to a new GIR (Global Info Research) study.
