Abstracts

The global Substrate Wetting Agent market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Substrate Wetting Agent makes a solid material more susceptible to water wetting. A solid material is wetted by reducing its surface tension or interfacial tension so that water can spread on or penetrate its surface. In general, the lower the surface tension of the substrate wetting agent. The stronger its wetting ability, the better the ability to resist substrate pollution.

This report studies the global Substrate Wetting Agent production, demand, key manufacturers, and key regions.
