Abstracts

According to our (Global Info Research) latest study, the global Subtitling Software market size was valued at USD 290.2 million in 2022 and is forecast to a readjusted size of USD 477.3 million by 2029 with a CAGR of 7.4% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Subtitling software providers give visual aid to videos in the form of subtitles, integrating transcribed text from dialogue and sounds as they happen. Subtitling software was originally designed to help the hearing impaired understand the spoken words and music happening on television shows and movies, but the technology is also used in different situations where it would benefit audiences that are not necessarily hearing impaired. Professional closed captioners offer services for real-time (live broadcast) and/or prerecorded video. Real-time closed captioning involves the immediate transcription of dialogue on talk shows, speeches, sporting events, and other programs. Prerecorded or offline closed captioning is designed for movies, television shows, games, and other media without a live element. Closed captioning services for YouTube and other web streaming platforms can involve both types of captioning, and as the variety of live streaming programs increases, so does the need for real-time closed captioning.
