Abstracts

The global Subtitling Software market size is expected to reach \$ 477.3 million by 2029, rising at a market growth of 7.4% CAGR during the forecast period (2023-2029).

Subtitling software providers give visual aid to videos in the form of subtitles, integrating transcribed text from dialogue and sounds as they happen. Subtitling software was originally designed to help the hearing impaired understand the spoken words and music happening on television shows and movies, but the technology is also used in different situations where it would benefit audiences that are not necessarily hearing impaired. Professional closed captioners offer services for real-time (live broadcast) and/or prerecorded video. Real-time closed captioning involves the immediate transcription of dialogue on talk shows, speeches, sporting events, and other programs. Prerecorded or offline closed captioning is designed for movies, television shows, games, and other media without a live element. Closed captioning services for YouTube and other web streaming platforms can involve both types of captioning, and as the variety of live streaming programs increases, so does the need for real-time closed captioning.
