Abstracts

The subway pantograph is a current receiving device for electric locomotives to receive current from the contact wires of the catenary. It is installed on the roof of an electric locomotive through an insulator and is an articulated mechanical component. When the pantograph is raised, its sliding plate is in direct contact with the catenary wire, and the current is taken from the catenary wire and transmitted to the interior of the locomotive through the roof bus for the locomotive to use.
